The block is then sliced in half along the plane that passes through point  $A$ , point  $B$ , and the center of the cylinder, revealing a flat, unpainted face on each half. The area of one of those unpainted faces is  $a \cdot \pi + b\sqrt{c}$ , where  $a$ ,  $b$ , and  $c$  are integers and  $c$  is not divisible by the square of any prime. Find  $a + b + c$ .

- 2 In a new school 40 percent of the students are freshmen, 30 percent are sophomores, 20 percent are juniors, and 10 percent are seniors. All freshmen are required to take Latin, and 80 percent of the sophomores, 50 percent of the juniors, and 20 percent of the seniors elect to take Latin. The probability that a randomly chosen Latin student is a sophomore is  $\frac{m}{n}$ , where  $m$  and  $n$  are relatively prime positive integers. Find  $m + n$ .

Steve says, "You're right. Here is the value of  $a$ ." He writes down a positive integer and asks, "Can you tell me the value of  $c$ ?"

Jon says, "There are still two possible values of  $c$ ."
