**Day 1** April 27th

- 
- 1** Find, with proof, all positive integers  $n$  for which  $2^n + 12^n + 2011^n$  is a perfect square.
- 
- 2** Let  $a, b, c$  be positive real numbers such that  $a^2 + b^2 + c^2 + (a + b + c)^2 \leq 4$ . Prove that

$$\frac{ab+1}{(a+b)^2} + \frac{bc+1}{(b+c)^2} + \frac{ca+1}{(c+a)^2} \geq 3.$$

- 
- 3** For a point  $P = (a, a^2)$  in the coordinate plane, let  $l(P)$  denote the line passing through  $P$  with slope  $2a$ . Consider the set of triangles with vertices of the form  $P_1 = (a_1, a_1^2), P_2 = (a_2, a_2^2), P_3 = (a_3, a_3^2)$ , such that the intersection of the lines  $l(P_1), l(P_2), l(P_3)$  form an equilateral triangle  $\triangle$ . Find the locus of the center of  $\triangle$  as  $P_1 P_2 P_3$  ranges over all such triangles.
- 

**Day 2** April 28th

- 
- 4** A *word* is defined as any finite string of letters. A word is a *palindrome* if it reads the same backwards and forwards. Let a sequence of words  $W_0, W_1, W_2, \dots$  be defined as follows:  $W_0 = a, W_1 = b$ , and for  $n \geq 2$ ,  $W_n$  is the word formed by writing  $W_{n-2}$  followed by  $W_{n-1}$ . Prove that for any  $n \geq 1$ , the word formed by writing  $W_1, W_2, W_3, \dots, W_n$  in succession is a palindrome.
- 
- 5** Points  $A, B, C, D, E$  lie on a circle  $\omega$  and point  $P$  lies outside the circle. The given points are such that (i) lines  $PB$  and  $PD$  are tangent to  $\omega$ , (ii)  $P, A, C$  are collinear, and (iii)  $DE \parallel AC$ . Prove that  $BE$  bisects  $AC$ .
- 
- 6** Consider the assertion that for each positive integer  $n \geq 2$ , the remainder upon dividing  $2^{2^n}$  by  $2^n - 1$  is a power of 4. Either prove the assertion or find (with proof) a counterexample.
