by BOGTRO, tc1729, rrusczyk

**Day 1** April 24th

- 
- 1 Given a triangle  $ABC$ , let  $P$  and  $Q$  be points on segments  $\overline{AB}$  and  $\overline{AC}$ , respectively, such that  $AP = AQ$ . Let  $S$  and  $R$  be distinct points on segment  $\overline{BC}$  such that  $S$  lies between  $B$  and  $R$ ,  $\angle BPS = \angle PRS$ , and  $\angle CQR = \angle QSR$ . Prove that  $P, Q, R, S$  are concyclic (in other words, these four points lie on a circle).

---

  - 2 Find all integers  $n \geq 3$  such that among any  $n$  positive real numbers  $a_1, a_2, \dots, a_n$  with  $\max(a_1, a_2, \dots, a_n) \leq n \cdot \min(a_1, a_2, \dots, a_n)$ , there exist three that are the side lengths of an acute triangle.

---

  - 3 Let  $a, b, c$  be positive real numbers. Prove that  $\frac{a^3+3b^3}{5a+b} + \frac{b^3+3c^3}{5b+c} + \frac{c^3+3a^3}{5c+a} \geq \frac{2}{3}(a^2 + b^2 + c^2)$ .

---

**Day 2** April 25th

- 
- 4 Let  $\alpha$  be an irrational number with  $0 < \alpha < 1$ , and draw a circle in the plane whose circumference has length 1. Given any integer  $n \geq 3$ , define a sequence of points  $P_1, P_2, \dots, P_n$  as follows. First select any point  $P_1$  on the circle, and for  $2 \leq k \leq n$  define  $P_k$  as the point on the circle for which the length of arc  $P_{k-1}P_k$  is  $\alpha$ , when travelling counterclockwise around the circle from  $P_{k-1}$  to  $P_k$ . Suppose that  $P_a$  and  $P_b$  are the nearest adjacent points on either side of  $P_n$ . Prove that  $a + b \leq n$ .

---

  - 5 For distinct positive integers  $a, b < 2012$ , define  $f(a, b)$  to be the number of integers  $k$  with  $1 \leq k < 2012$  such that the remainder when  $ak$  divided by 2012 is greater than that of  $bk$  divided by 2012. Let  $S$  be the minimum value of  $f(a, b)$ , where  $a$  and  $b$  range over all pairs of distinct positive integers less than 2012. Determine  $S$ .

---

  - 6 Let  $P$  be a point in the plane of  $\triangle ABC$ , and  $\gamma$  a line passing through  $P$ . Let  $A', B', C'$  be the points where the reflections of lines  $PA, PB, PC$  with respect to  $\gamma$  intersect lines  $BC, AC, AB$  respectively. Prove that  $A', B', C'$  are collinear.
